All vehicles brand and numbers are used in this catalogue to identify the car model upon which a part may be fitted.Our "Non Original" items are perfectly adaptable to the car models which they have been referred to.

2020

We welcome you, dear friends! We invite you to an excursion around our factory. With over 10 years of experience in exporting our products, we have prepared competitive conditions for you. Owning high-quality moulds, observing strict control of geometry, communicating with the founding factories of the brands, we can accurately guarantee the quality of products that meet high standards. All products are certified in accordance with the requirements of international quality standards. The company got the TS16949 international quality system certification in 2013. All metals and their alloys, from which car body parts are made, meet the following requirements: high fatigue strength; high anticorrosive properties; good strength properties of the part in combination with the necessary plastic properties during stamping and achieving a given shape.The main material from which most of the bodywork is made is sheet steel - low carbon steels ST14 and ST12. The use of laser cutting provides a gap of no more than 3 mm, as with the manufacturing plants. Parts are painted using electrophoresis, under the strict control of the quality control department.

Our range of European car brands includes more than six thousand items. We are trying to constantly expand the range of products.

We are entering the European market. Be among the first to take advantage of the opportunities to boost your business.
